

4 Reasons to Modernize Information Systems

Deliver Richer Customer Experiences

Providing a superior customer experience is difficult to do without the ability to quickly locate and deliver accurate information. Customers today expect fast, information-rich digital and mobile experiences. Outdated enterprise content management (ECM) systems and other legacy applications for managing business-critical information were not built for the digital age—leaving them incapable of serving the needs of today's organizations. Modernize your information management ecosystem, reduce legacy burden, and empower your teams to deliver best-of-breed customer experiences.

Increase Operational Efficiency

Information in today's enterprise is often stored in disjointed, disorganized, and disparate systems. The result is a constant and grinding drain on productivity and morale as business users are forced to allocate valuable time trying to locate the most relevant and up-to-date information to do their jobs and serve customers. For IT departments dealing with outdated technologies, the struggle to integrate these legacy systems with newer solutions delays the delivery of critical functionalities and creates an environment that is prohibitive for information sharing and collaboration.

Increase Market Share and Bottom Line

Today's demanding market makes it more important than ever to maintain a razor-sharp competitive edge. Organizations must find ways to digitally transform their business operations to deliver the high-quality and engaging experiences expected by today's customer. Implementing effective transformation initiatives requires intelligent and efficient use of information. Agile platforms built on modern technology can deliver secure, lightweight, user-friendly applications for solving unique and complex information management needs. Get the results you want: loyal and engaged customers and increased share of customer wallet.

Meet Compliance Requirements

Storing and managing content using outdated systems and processes can create unintentional compliance nightmares: security vulnerabilities, governance violations, and an increased risk for information breaches. In a world where compliance and security are essential to maintaining customer satisfaction, it's critically important to use a platform that has security and governance at its core.

The Solution

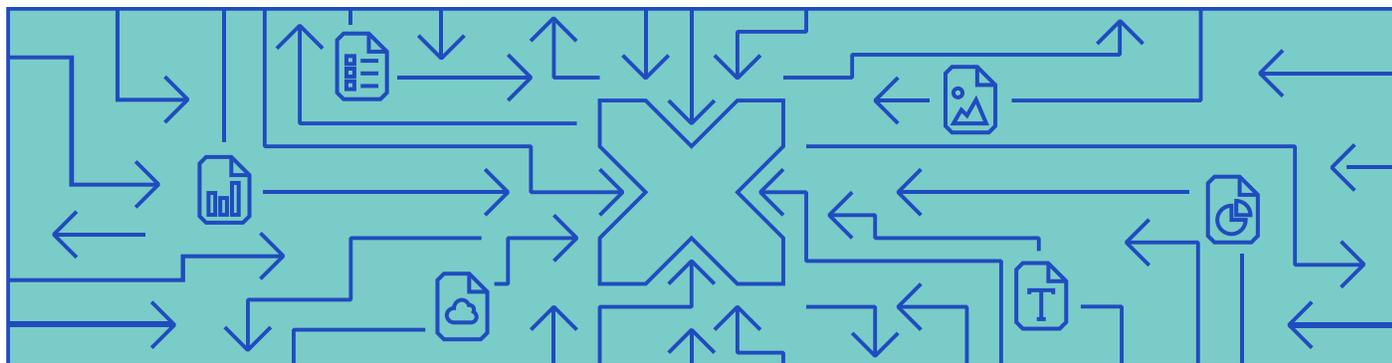

Developed for the modern era, the Nuxeo Content Services Platform unifies and extends the use of digital information across the enterprise. Nuxeo is uniquely architected to meet the needs of today's organization, transforming how you:

- Deliver value to customers
- Future-proof business operations
- Drive competitive advantage
- Enhance security and compliance

Nuxeo delivers a modern, connected, and personalized platform for driving efficiencies and delivering value throughout the organization.

Enable Strategic Modernization

Our **“Connect + Consolidate”** approach allows organizations to quickly implement a modern solution that connects information from any existing system. Improve efficiency and customer experience by making information discoverable, findable, and usable in seconds—not minutes, hours, or days. Once information is connected, it can be evaluated for importance within current systems and applications. Organizations can use this information to determine the most cost-effective path forward to retire outdated legacy systems and applications and reduce total cost of ownership.

Customize Your Applications—Nuxeo provides a low-code rapid application development capability to enable organizations to create personalized business applications that solve real-world business problems—fast.

Leverage Existing Investments—Nuxeo enables organizations to view content in one place and then leverage our solution to build next-generation content applications without the disruption of moving legacy applications—or the content that resides within them—onto a new platform.

Quickly Access Your Information—Nuxeo delivers flexible, centralized management and access to content across the enterprise. The platform integrates with existing systems, connects

The Nuxeo Difference

It starts with architecture. With an open source and cloud-native foundation, Nuxeo leverages technologies such as artificial intelligence (AI) and machine learning (ML) to deliver an agile and flexible approach that paves the way for organizations to rapidly and strategically modernize their information systems. Nuxeo removes the burden of legacy information systems, giving organizations the power to:

- Limit operational disruptions
- Reduce costs
- Increase return on investment (ROI)
- Decrease risks

to core content repositories, and applies a rich metadata layer to existing assets.

Make Content Usable—Nuxeo moves beyond “retrieve and present” to an environment in which the platform provides context within automated business processes—so you can deliver relevant, up-to-date digital information.

Enhance Security and Compliance—Nuxeo's advanced, highly-configurable access control system ensures that information remains secure, with detailed audit trails and reports that enable you to manage information governance from all angles.
